Introduction

In this document the products present in PricePedia will be listed in a table with their description in reduced and extended form. The table also indicates the possible presence of the products in the different sections **Benchmark**, **Range** and **Daily Data**.

The database built by StudiaBo for the PricePedia project contains time series of monthly and daily prices of different types of products. They are divided into two levels with increasing detail:

- **typologies**: it is the top level group-

ping and contains the clusters distinguished by the main property that makes the products in the group homogeneous. The main property may concern an aspect of the chemical composition, as in the case of "ferrous" and "non-ferrous", or the operational use, as for "energetic" or "food";

- **families**: it is the lower level grouping and contains products with a higher level of detail than the typologies. Each typology may contain more than one product family. Each family contains products that share similar chemical composition, such as "aluminium alloys", or are different but result in a similar semi-finished product.
